Hello,

I hope you're doing well. I'm currently a graduate CS student at the Stony Brook University. I have prior experience of two and half years as a software engineer at Samsung R&D India, where I have extensively worked on virtual assistant NLU team tasks. I am part of NLU core team which has released the first version of Samsung virtual assistant competitive to Siri, Cortana. I am currently looking for Software Engineering opportunities in June 2018.

I have attached my resume to this application. If you're aware of positions where I might be a potential candidate, please consider my candidacy for an interview opportunity.

Thank you for your time.
